

Easton Field and Hip Quivers

Target shooting is a technical and high-precision sport. However the current market is saturated with traditionally-styled shooting accessories. The Easton quivers feature athletic materials and styling that compliment the athletic and technical nature of the sport today.

Innovative feature like the oversize pocket that integrates the shaft and sling and a molded arrow sorter help target shooters to organize their gear efficiently and effectively. The angle-adjustability of the shaft allows archers to customize the position of their arrows to accommodate for individual shooting preferences.

Project Documentation

Easton Field and Hip Quivers

Design Team:

- Michael Horito
- Janna Budge
- Dayne Tanner

Materials & Processes:

The field and hip quivers were developed through a combination of observational research, focus groups, and sketching. Prototypes were created from technical drawings and modified to meet the users needs.
